

THE POWER OF
REDARC®

THE MANAGER RANGE

THE MANAGER30

PART #	DESCRIPTION
BMS1230S3	The Manager30 (Standard Display)
BMS1230S3R	The Manager30 (Redvision Display)
TVMSKIT05	The Manager30 + Redvision Kit

The Manager range has changed to improve installation, reliability and bring the product into line with REDARC R-Bus standards.

Redarc have removed the T-Piece by adding a second R-Bus connection to the Main Unit. This will improve the reliability of the R-Bus connections in the Manager system.

Redarc have also improved the Shunt by increasing the length of the R-Bus cable, changing the plug to RJ45 and adding an R-Bus terminating resistor. This means that the Shunt can now be installed further from the Main Unit, which is often a requirement in smaller trailers.

Redarc have also created a variant of the Manager30 which comes with the new RedVision display. This provides an improved, 4.3" colour display as well as allowing connection of the Manager30 to the RedVision phone application. Finally, Redarc will be introducing the TVMSKIT05 which will be superseding the TVMSKIT04. The TVMSKIT05 combines the award-winning RedVision Total Vehicle Management System and the BMS1230S3 to provide full control and monitoring of a 4X4, camper, caravan or motorhome.

FEATURES:

- Simplified Installation
- Increased Reliability
- More Installation Flexibility
- BYOD Bluetooth Connectivity (BMS1230S3R Model & TVMSKIT05)
- Protects vehicle from incorrect wiring
